2. IMPROVED ITEMS

2.1 Tester Driver Controller (stest.sys)

2.1.1 VS Applied Voltage Setting Range

- (1) VS, SET DUT VS, and SET PPS Statements and Transferring Burst Conditions Written in the SEND MPAT Statement

If the voltage value within the range shown below was specified when the VS range is set to 16V, a runtime error occurred.

$$-5V \leq \text{voltage value} < -3V$$

The error codes are as follows:

For the VS statement: 3111

For the SET DUT VS and SET PPS statements: 12371

When transferring the burst conditions of the SEND MPAT statement: 12520

Improved ➡ The specified value is now correctly set.

Relevant revisions: REV 6.00B through REV 6.00C

Relevant systems: T5376 and T5375

- (2) 2 Dimensional Shmoo Plot (SHM2) and 3 Dimensional Shmoo Plot (SHM3)

If the voltage value within the range shown below was set in the VS, BVS, and OVS, “?” was displayed in the plot.

$$-5V \leq \text{voltage value} < -3V$$

Improved ➡ The Pass or Fail result is now correctly displayed.

Relevant revisions: REV 6.00B through REV 6.00C

Relevant systems: T5376 and T5375

2.1.2 Changing the VS Voltage Measurement Range

When the measurement range was set to -6V, over-data was generated for the measured value within the range shown below.

$$-4.996V \leq \text{measurement value} < -2.996V$$

Improved ➡ No over-data is generated.

The programs listed below have been changed due to the improvement.

- The LIMIT statement
- MEAS/START VS statement
- GETVSADC of the PPS parallel-drive VS control utility

Relevant revisions: REV 6.00B through REV 6.00C

Relevant systems: T5376 and T5375
